Experience

Data Analyst @ Squarespace, Performance and Strategic Analytics – New York, NY Jan 2026 – Present

- Building 0 to 1 B2B sales motion, servicing data infrastructure in dbt, dashboarding via Hex and Salesforce, and identifying KPIs for goal tracking and program evaluation.
- Developed customer health score and alerting for Premium accounts, leading to 40% email open rate, 28% increase in meeting rate, and prompting 15+ churn retention plays.
- Supporting Squarespace product initiative, identifying key populations for feature parity survey to 45,000+ customers, calculating scheduling intent to inform cannibalization rates and pricing plan decisions.

Future Analytics Star Program @ NBA – Remote Jan 2026 – May 2026

- Using tracking era data, predicted 30% for Shai Gilgeous-Alexander to win MVP at All Star Break using Random Forest Regressor (RMSE of 0.05) and was selected from 2,400+ applicants.
- Conduct hypothetical Seattle and Las Vegas expansion mock draft by developing player retention valuation and season win total projection using DARKO and roster age (RMSE 9.7).

Data Analyst @ NYU Langone Health, Rapid RCT Lab – New York, NY May 2023 – Dec 2025

- Present quality improvement trial ideas and results to leadership teams ranging from C-Suite, kidney transplant, antibiotic stewardship, and other areas of hospital.
- Assessed relationship between high heat days and 200,000 emergency department visits over past four years using case crossover design, in order to build new patient safety messaging system.
- Evaluated 4200 encounters over 15 months from an antibiotic stewardship program using difference in differences methods and found that it reduces 30 day readmission rate by 20%.

Research Assistant @ UW Department of Atmospheric Sciences – Seattle, WA Sept 2019 – Jun 2021

- Performed exploratory analysis on over 140,000 particles from Southern Ocean Clouds, Radiation, Aerosol Transport Experimental Study (SOCRATES) probe data using matplotlib, numpy, and xarray.
- Used Scikit-Learn to build and optimize a binary random forest classifier, distinguishing over 5 million liquid and ice cloud particles with 95% accuracy, a 20% increase from previous non-ML methods.

Technologies and Skills

Languages: Python (pandas, matplotlib, plotly, numpy, scikit-learn, tensorflow, seaborn, pytorch, onnx, flask), R (base, tidyverse, ggplot, Shiny, glm, stan, bartcause), Java, HTML, CSS, SQL, SQLite, Duckdb

Software: Hex, dbt, Jupyter Notebook, BigQuery, Amazon Web Services, Git, Claude, Cursor, Google Workspace, Microsoft Office, LaTeX, Adobe Acrobat, Tableau, Databricks, Visual Studio Code, RStudio, Docker, Linux

Skills: Causal Inference, Predictive Modeling, Machine Learning, Randomized Controlled Trials, A/B Testing, Experimental Design, Dashboarding and Reporting, Prompt Engineering, Behavioral Science (COM-B Framework)

Education

New York University, M.S. in Applied Statistics for Social Science Research Sept 2021 – May 2023

University of Washington - Seattle, B.S. in Applied Math Sept 2018 – Jun 2021
